

Can users smoothly browse the store, add an item, and complete checkout while creating an account?

SITE <https://stirring-maamoul-2b0d06.netlify.app>

AGENTS 3

DATE September 8, 2026

VERDICT

● High confidence

Mostly works, but account creation is absent from checkout. All three agents completed purchases, yet the core goal—creating an account during checkout—is not supported by the site's checkout flow.

Browsing and purchasing work smoothly end-to-end, with clear categories, cart updates, and a simple checkout form. However, the site's checkout flow has no account creation prompt — agents either completed as guests (Maham, Nida) or had to detour through a nav modal (Fariha), which broke the checkout context and required re-entering all form data. Additional secondary issues include a broken Quick View button, a misleading "Sign in" heading on the sign-up form, a character-encoding error on the order confirmation, a limited country list contradicting a "Worldwide" claim, and cash-on-delivery shown as only payment method regardless of country.

100% or more of agents reported the same friction points across 3 runs.

Findings

8 findings synthesized from 3 agent sessions

● Confirmed Issue

Onboarding

3/3 agents

No account creation option exists in checkout

During checkout, users consistently report reaching the Order Confirmed screen without any account-creation prompt or option appearing, forcing them to complete purchases as guests. Observations span multiple personas and orders (SE-18749, SE-36169, SE-97252), confirming this is a systemic gap in the onboarding flow rather than an isolated incident. One user also noted a character-encoding error in the shipping line that compounds the poor checkout experience.

WHERE Checkout form page

TRIGGER User attempts to create an account during checkout as instructed

“Reached the final “Order Confirmed” screen for Golden Bloom. Order #SE-18749 was placed for \$280.00 via cash on delivery and shows the shipping destination; checkout completed without any account-creation prompt.”

— Maham Qureshi

“The order confirmation is clear, but checkout never offered account creation. The shipping line also contains a visible character-encoding error.”

— Nida Shirazi

Navigation

2/3 agents

Quick View button is non-functional

The Quick View button on product cards is non-functional across multiple user sessions, forcing users to abandon it and use alternative navigation methods like clicking product names or add buttons. Both affected users noted the button only appears on hover, suggesting a UX affordance issue compounded by broken interaction. This represents a failed feature that should either be fixed or removed from the product card interface.

WHERE Product collection grid

TRIGGER User clicks Quick View button on a product card

"The product card only revealed "Quick View" after hovering, and clicking it did nothing. I'll choose a standard item instead."

— Fariha Zaman

"Quick View" does nothing. I'll just use the plus button."

Copy & Messaging

2/3 agents

Character-encoding error visible on order confirmation screen

On the order confirmation screen, a character-encoding error appears in the shipping line, displaying "Other Phone" instead of properly formatted text. This occurs consistently across multiple test personas and undermines confidence in the completed transaction despite successful order placement.

WHERE Order confirmation page

TRIGGER User reaches the final order confirmed screen

"The order confirmation is clear, but checkout never offered account creation. The shipping line also contains a visible character-encoding error."

— Nida Shirazi

"The order is confirmed, but the shipping line shows "Other â€¢ Phone," a visible encoding error."

Sign-up modal displays incorrect 'Sign in to your account' heading

The sign-up modal displays the incorrect heading "Sign in to your account" when users toggle to the registration form, creating confusion about the form's actual purpose. While the input fields clarify the mode, the mismatched heading represents a clear copy error that should be corrected to "Create your account" or similar.

WHERE Auth modal — sign-up form

TRIGGER User switches to the registration form via the toggle button

"The registration form still says "Sign in to your account." The fields make the actual mode clear, but the heading is sloppy."

— Fariha Zaman

Country list omits many South Asian markets despite 'Worldwide' claim

The country dropdown omits Bangladesh and other South Asian markets despite displaying a "Worldwide" claim at the top of the form. Users from unlisted countries like Bangladesh are forced to select "Other," which then defaults to Pakistan-based shipping settings, creating an unreliable checkout experience.

WHERE Checkout form — country dropdown

TRIGGER User from Bangladesh (or other unlisted country) tries to select their country

“Bangladesh isn’t in the country list, despite “Worldwide” at the top. I have to use “Other.””

Confirmed Issue

Trust

2/3 agents

Category images do not match stated product type, undermining trust in the catalog

Product category images consistently fail to represent stated items—bag and yarn photos lack convincing embroidery details, and Wall Art category displays an oversized plain tote instead of related artwork. These mismatches force users to demand proper detail pages before committing to higher-value purchases (\$195+), directly undermining catalog trust and creating friction in the discovery phase.

WHERE Collections gallery and category pages

TRIGGER User browses category (e.g., Wall Art) and sees unrelated product imagery

“The categories are clear, though the stock-looking bag and yarn photos do not show the promised embroidery very convincingly.”

Possible Friction

Onboarding

1/3 agents

Account creation via nav modal breaks checkout context and requires re-entering all form data

When users create an account via the navbar modal outside the checkout flow, they are redirected to their profile page, completely breaking the checkout context and losing all previously entered form data. Users must manually re-enter

shipping and payment information despite the system retaining their cart, creating significant friction and abandonment risk. This design flaw makes in-checkout account creation not just desirable but essential.

WHERE Auth modal triggered from navbar, then return to checkout

TRIGGER User creates account outside checkout flow and is redirected to profile page

“Account creation works, but it dumps me on my profile and breaks the checkout flow. At least the cart still shows one item.”

Browsing, cart, and checkout flow is fast and low-friction for Pakistani users

Three personas successfully completed checkout without friction, reaching order confirmation screens for purchases ranging from \$195–\$280 via cash on delivery. Two users noted that no account-creation prompt appeared during checkout, while one user completed the flow with a newly created account. The fast, streamlined experience demonstrates that the browsing-to-confirmation journey is efficient for Pakistani users, even when account options vary.

“Reached the final “Order Confirmed” screen for Golden Bloom. Order #SE-18749 was placed for \$280.00 via cash on delivery and shows the shipping destination; checkout completed without any account-creation prompt.”

— Maham Qureshi

“Reached the final Order Confirmed screen for Traditional Elegance, order #SE-97252, total \$195.00, paid by cash on delivery. The purchase completed successfully, but no account-creation prompt or option appeared during checkout.”

— Nida Shirazi

“Reached the final “Order Confirmed” screen. Order #SE-36169 was placed for Golden Bloom x1 at \$280.00, with the newly created Fariha account signed in.”

Flow Analysis

Stage-by-stage breakdown of the user journey

1 Homepage & Category Discovery

Minor friction

Visual representation misalignment between category names and product displays.

3 of 3 agents navigated category discovery successfully but questioned visual authenticity and labeling clarity.

All personas found the category structure intuitive and reached relevant sections without friction. However, placeholder imagery and missing product details (names, prices, preview options) created trust gaps that undermined confidence in collection accuracy and personalization capabilities.

Recommended Actions

Prioritized improvements based on observed agent behavior

- NOW

Implement account creation flow directly within the checkout process, allowing users to create an account without leaving the checkout context or re-entering form data

This was the core goal of the test and is completely absent. All 3 agents completed purchases but could not achieve the primary objective. This is a critical blocker for the stated user journey.
- SOON

Fix the Quick View button functionality to enable product preview without page navigation

Non-functional Quick View impacts browsing efficiency and affects 2 out of 3 agents. While not blocking checkout, it degrades the browsing experience that precedes account creation.
- SOON

Correct character-encoding errors on the order confirmation screen and fix the 'Sign in to your account' heading label in the sign-up modal

Both copy issues affect post-purchase trust and onboarding clarity. The confirmation screen error (2/3 agents) is visible at the critical moment after purchase completion.
- SOON

Expand the country list in checkout to include South Asian markets (Pakistan, Bangladesh, India, Sri Lanka, Nepal) and audit against 'Worldwide' claim in marketing copy

Medium severity affecting international reach. Given the test was conducted with Pakistani users who experienced friction, this directly impacts conversion for the stated target market.
- LATER

Audit and correct category images to accurately represent the product types they display, restoring catalog trust

Medium severity affecting 2/3 agents. While it impacts initial browsing confidence, it doesn't directly block the checkout flow. Address after core account creation and form functionality are resolved.

Agent Sessions

How each persona fared during the test

- Maham Qureshi

Completed

Browsed the wedding category, added Golden Bloom to cart, and completed checkout as a guest with no account-creation prompt ever appearing.
- Nida Shirazi

Completed

Navigated to Wall Art, added Traditional Elegance to cart, and finished checkout via cash on delivery as a guest without any account-creation option offered.
- Fariha Zaman

Struggled

Added Golden Bloom to cart, had to manually create an account via the nav modal mid-checkout (breaking the flow and requiring double data entry), then re-completed the checkout to reach order confirmation.
